Work Experienc

Jun 2025 – Present — PT. Kolaborasi Tujuh Pelangi

Fullstack Developer

Job Description:

1. Developed and enhanced an end-to-end export-import cargo management system, managing cargo flows from overseas shipment and customs clearance to warehouse processing and final release, with integration supporting CEISA and Indonesian Customs processes.
2. Developed a finance management system for tracking and processing billing, receivables, and payables associated with export-import operations, improving financial visibility throughout the cargo lifecycle.

Aug 2024 – Present — PT. Gema Phala Ananta

Fullstack Developer

Job Description:

1. Designed and contributed to the UI/UX of websites using Figma to create a user-friendly and visually appealing interface.
2. Developed and integrated an AI-powered chatbot for automated master data management, enabling users to perform create, update, and delete operations through natural language commands.
3. Integrated Groq AI to analyze and validate gas fuel consumption calculations, generating analytical insights and connecting the results with expert analysis to improve calculation accuracy and decision support.

Jun 2023 – Jun 2024 — PT. Finexus Group Jakarta

Software Engineer (Fintech)

Job Description:

1. Analyzed, maintained, and enhanced complex payment gateway systems by resolving technical issues, implementing functional improvements, and optimizing system reliability and performance.
2. Analyzed Payment Gateway business processes and program workflows, particularly in scheduling and service environments.
3. Optimized scheduler performance to handle thousands of daily transactions and concurrent jobs, improving processing efficiency while preventing conflicts between simultaneously running processes.

Jun 2022 - Dec 2022 — PT. Finpoint Solusi Indonesia

Backend developer (Fintech)

Job Description:

1. Created and implemented daily and monthly transaction reports to enhance financial insights and tracking.
2. Integrated payment gateway APIs with the frontend to enable seamless access to transaction data and reporting.
3. Implemented MongoDB for transaction processing to support flexible and dynamic data structures, replacing PostgreSQL for transaction flow management.

SKILLS

- **Frontend**: Next JS, Type Script, HTML5, CSS, SCSS
- **Backend and DBMS**: Golang, Typescript, Postgresql, Rest API, Oracle, MySQL, MongoDB, PostgresS, Filezilla, Ubuntu
